

LINK TO CENTRALIZED RESOURCES
CONNECT FOR HEALTH COLORADO BOARD ADVISORY
GROUP MEETING
JANUARY 29, 2020

Background

- 2019 CoverCO tour included a session on community conversations.
- The purpose of the session was for attendees to identify barriers affecting health, other than health coverage, in their community (e.g. transportation, food insecurity, housing, etc.).
- Attendees were asked to identify potential solutions or next steps to help address the barriers they identified. A common theme was to have access to centralized customer resources for customers like local foodbanks, affordable housing, etc.

Most Needed Resources - CoverCo Community Session Results

- During our time on the road with CoverCo we talked to the communities about other influences that they see in their area affecting health outcomes. There were consistent answers given to us from across the state. The most common answers in order of frequency:
 - Transportation
 - Mental Health
 - Housing
 - Food
 - Income (Employment)
 - Education
 - Community Engagement
 - Defined as lack of community resources such as Rec Centers, Interpreters and other community based services.

Questions and Other Resources

1. Should Connect for Health be involved in providing a link to resources for these other social determinants of health in Colorado?
2. Is adding a community resource page to our website a good idea?
3. If it is determined it is a good idea, how is the best way to break it down? By resource? By area?
